This study’s purpose is to investigate hospital staff’s perceptions on their managers' leadership styles who are autocratic, democratic, participative, liberal, charismatic, paternalist, transactional and transformational, their productivity levels and the relationship between their perceptions on leadership types and work productivity. Population of the study consist of 7 hospital employees in Isparta. Stratified sampling method is used and 525 people is included in the study. To evaluate the perception of the staff about their managers' leadership styles, miscellaneous surveys are utilized in the literature. As a result of the study, it is found that, paternalist and transformational leaders increase the work productivity. On the other hand, liberal, autocratic, charismatic leadership styles decrease the work productivity. Also it is noted that there is no statistically significant relationship between the work productivity and democratic, transactional and participatory leadership styles.

Key Words: Leadership and Types of Leadership, Hospital, Work Productivity
