Sexual abuse/assault cases in the world and in Turkey create serious bio-psychosocial problems. The most severe form of these actions, incest is commonly encountered. In our case report it is aimed to evaluate the girl who has been the victim of an incest relationship psycho-pathologically and attract attention to the shortcomings in this case. As a result of a female victim who was born out of incest relationship between the father and his daughter, who later committed suicide when she was 16 after being sexually abused for a long time both by her father (also her grandfather) and an extra familial person sexual abuse by father emerged and the case reported to judicial procedures.
