

This study aims to determine the organization and service delivery capacity of Turkish health sector which arise from the reform process of late years by use of literature review and content analysis method. After year 2003, Turkish health sector experienced a significant reform process with Health Transformation Programme which is supported by World Bank. With reference to statistical data sets of OECD, WHO and Ministry of Health it can be seen that the organization and service delivery capacity has changed in the aspect of quality and quantity. Current situation related to organization and service delivery capacity of Turkish health sector reveals that there are advancements in health indicators and a development process about criteria such as institutional structuring, human resources and hard infrastructure is in progress.
