Almost born in the same year, the group of individuals with common characteristics can be defined as the generation. Generation classification is made as Traditionalists, the Baby Boomer, Gen X, Y and Z. As part of this research, student's problems were researched for the Y Generation who was born between 1980-1999. These problems have been identified with brain storming method, have been analysed with fishbone diagram and solution proposals have been presented by why-how tree diagram according to students’ view of Süleyman Demirel University Isparta Vocational High School. Thus, it is aimed to improve the quality of education. It would make important contributions if new researchers study about particularly the characteristics of generations in Turkey.
