Almost born in the same year, the group of individuals with common characteristics can be defined as the generation. Generation classification is made as Traditionalists, the Baby Boomer, Gen X, Y and Z. As part of this research, student’s problems were researched for the Y Generation who was born between 1980-1999. These problems have been identified with brain storming method, have been analysed with fishbone diagram and solution proposals have been presented by why-how tree diagram according to students’ view of Süleyman Demirel University Isparta Vocational High School. 50 student have been selected from each of the seven departments in other words a total of 350 students of Süleyman Demirel University Isparta Vocational High School participated in this research. As a result of findings obtained from this research, students’ problems and solutions proposals by generation Y perspective should be shared with university management and local authorities so that the quality of education is expected to improve. The importance of this research is to identify the problems of students, to improve of the main problems and implementation of regulation and development works in other issues within the framework of total quality management. Also it would make important contributions if new researchers study about particularly the characteristics of generations in Turkey.
