The river tourism, which is very important for nature tourism and do not require large investments, constitutes a whole together with environmental, historical, archaeological, cultural, authentic values and other types of tourism. Turkey, which has rich in natural resources, offers a significant potential with a variety of sporting activities (especially rafting, canoeing and river kayaking, etc.). In this context, the rafting activities are done intensively on some rivers (include Köprüçay, Manavgat, Dim, Adana Feke, Goksu and Zamat) of Turkey. Köprüçay Rafting Area which is located in The Köprüülü National Park of Antalya is one of the most important nature tourism destination in the area of our country. Köprüçay Rafting Center, there are variety problems about environmental, social, economic, political, the spatial, administrative dimensions. The most important issues; to be overcrowded with higher capacity utilization, environmental pollution, irregular constructions and lack of spatial organization, lack of transportation and accommodation, restrictive legislation etc. can be summarized. As results, for sustainable protection and utilization of Köprüçay Rafting tourism areas are suggested to planning and management & economical instruments.
