Accommodation business has an important place in the tourism sector, which has positive effects on the country's economy. In recent years, the all-inclusive system has been at the forefront of the types of pensions that are heavily used in accommodation enterprises operating in the region of the countryside. It is possible to say that the all-inclusive pension system is a significant influence on the activities of the food and beverage departments of the accommodation enterprises and the departments associated with this department. In this context, it is aimed to determine the effect of the all-inclusive system used in the hospitality operations on the food, beverage and beverage division and management. For this purpose, a survey was conducted in the Bodrum region, which is one of the leading tourism attraction centers of Turkey. The main population constitutes the managers responsible for food and beverage departments in four and five star hotels and first-class holiday villages that implement the all-inclusive system in and around Bodrum. Survey forms were used as data gathering means in the survey, survey application was conducted face to face with the managers responsible for the food and beverage section of the accommodation enterprises. The data obtained from the study were analyzed by frequency analysis, Kruskal-Wallis and Mann Whitney U tests.
