Introduction and Goal: The purpose of our study is to examine the internet addiction and eating behavior of students who are studied at undergraduate level in the sport sciences faculties.

Method: 365 students (101 female and 264 male) participated in the research voluntarily as part of the Faculty of Sport Sciences at Suleyman Demirel University. Demographic information form, Young Internet Addiction Test Short Form and Three Factor Eating Short Form were used to collect research data. Correlation analysis was applied by using SPSS package program.

Findings: As a result of the correlation analysis of the students who participated in the research, it was found that there was a weak correlation between internet addiction scores and three factor eating scores (p<0.05).

Result: The results have shown that internet addiction may be the reason for the increase of negative eating behavior.
