The aim of this study is to determine the expectation and satisfaction levels of sportsmen who play volleyball in secondary education institutions. In this context, meeting the expectations and increasing the level of satisfaction are important for the athletes. Age range of participating athletes; It is between the ages of 14-18. When the frequency and percentage distribution according to age variable were examined, it was observed that participation in competitions was highest in the seventeen age group (52 - 31.1%). The majority of the learning group is Anatolian high school; (94- 56.3%). Lesson The majority of the grade is appreciated (67- 40.1%). When examined as professional groups; Father profession; Self-employment (63- 37.7%); (113- 67.7%). According to the study findings, athletes; their families (95- 56.9%) and their teachers (89- 53.3%) are asked to support their sports. As a result, in this study, the expectation and satisfaction levels of the athletes are close to each other. The majority of the items, which are formed to determine the level of expectation and satisfaction, have a high level of participation. It should be stated at every opportunity that the parents of the students do not negatively affect the lessons of the students. In our study, it was observed that athletes were highly supported by the school administration in order to increase their success in the course (84- 50.3%). Motivation factor was found to be important; It was seen that physical education teachers (109- 65.3%) gave a motivating speech. Nutrition, good and bad course also affect the motivation. The athletes should be promoted together with their families by providing material and moral support.
